BIOAGRONOMIC CHARACTERISTICS

NAVIGA contains microorganisms to be applied on the leaf apparatus, and also allows the development of fungi such as *Metarhizium anisopliae*, *Beauveria bassiana* and other species capable of developing with protein and chitin substances in the bodies of pathogenic insects. NAVIGA's microorganisms produce spores that cause the insect to metabolically block. NAVIGA creates an environment unsuitable for the development of pathogenic insects and promotes the growth of beneficial insects.

FINAL RESULT

- Reduction of unwanted insects.
- Increased well-being of the plant.
