

PONEM

PRODUCT WITH SPECIFIC ACTION
Inoculation of mycorrhizal fungi

PERMITTED IN ORGANIC FARMING

BIOAGRONOMIC CHARACTERISTICS

PONEM is an inoculum of mycorrhizal fungi that allows, in sandy soils well endowed with organic substance and with the presence of water, the development of fungi such as **Pochonia Chlamydosporia**, **Paecilomyces lilanicus**, **Arthrobotrys oligospora** and others. These microorganisms bind to the roots of the plant create some multiple advantages, such as:

- Poor presence of nematodes and eggs;
- Better rooting of the seedling;
- Development of the root system;
- Increased nutrient absorption.

DOSES AND METHOD OF USE

Application Type: ON THE GROUND

It can be used for fertigation:

HORTICULTURAL: 4-5 kg/ha carry out the treatment before transplanting or sowing and repeat every 20/25 days.

ARBOREAL and VINE: 5 kg/ha inject along the row and spray until the product comes into contact with the roots. Repeat after 15/20 days.

NURSERIES: from 3-4 kg/ha.

LILIACEAE: 4-5 kg/ha carry out the treatment before transplanting or sowing and repeat every 20/25 days.

APPLICATIONS • Spray the roots or clod of the seedling before transplanting. It can be distributed to the ground with hose or other, repeated several times depending on the vegetative cycle of the crop starting from the vegetative recovery.

It has no shortage time and leaves no residue.

The product is recommended to apply it with organic matter such as ORGAN BLEND.

WARNINGS • *The product is miscible with most pesticides excluding products containing copper or antibacterials. However, it is necessary, in any case, to perform a test before application. The manufacturer is not liable for damage caused by improper use of the product.*

MICROORGANISMS

COMPOSITION

Type of organic soil improver:
simple non-composted
vegetable soil improver

- Mycorrhizae content 0.1%
- Rhizosphere bacteria content 10^7 CFU/gr

FORMULATION

LIQUID
