

# ALT TOP

SPECIFIC ACTION PRODUCT  
Inoculation of mycorrhizal fungi

ALLOWED IN ORGANIC FARMING

## BIOAGRONOMIC CHARACTERISTICS

ALT TOP contains a pool of microorganisms which, by rebalancing the microbial flora present in the plant, allow optimal development, and activating an increase in natural defenses and therefore resistance to attacks by biotic and abiotic pathogens. These microorganisms have a predominant antagonism action towards the pathogen, protecting the health of the plant and fruit.

## FINAL RESULT

- Natural resistance to pathogenic fungi and bacteria.
- Improvement of the state of well-being of the plant.
- Reduction of stress from pathogenic attacks.
- Advance and increase in the quality of production.
- Fruit and vegetables without residue.

## DOSES AND METHODS OF USE

Type of application: FOLIAR

It can be used on all crops:

VINE: 2.5 kg/ha from flowering onwards

ARBOREAL: 2-2.5 kg/ha;

HORTICULTURAL: 2-4 kg/ha;

Greenhouse: 250-400 gr/1000sqm.

It is used in the final phase of treatments about 40-50 days before harvesting, with scheduled interventions. It also has an effect of reducing the presence of phytosanitary residues.

**APPLICATIONS** • It should be repeated 5-7 days after the previous treatment or as soon as the conditions are created  
It has no shortage times and leaves no residue.

It is advisable to distribute the product in the coolest hours of the day with the addition of LECITINA.

**WARNINGS** • *The product is miscible with most pesticides, excluding copper. However, it is necessary, in any case, to carry out a test before application. The manufacturer is not liable for damage caused by improper use of the product.*

LIVE MICROORGANISMS

## COMPOSITION

Type of organic soil improver:  
simple non-composted  
vegetable soil improver

- Mycorrhizal content 0.1%
- Rhizosphere bacteria content 107 CFU/gr

## FORMULATION

LIQUID

## PACKAGING

5 kg tank

10 kg jerry can
