

CALBIO FIX

SPECIFIC ACTION PRODUCT
Inoculation of mycorrhizal fungi

ALLOWED IN ORGANIC FARMING

BIOAGRONOMIC CHARACTERISTICS

CALBIO FIX is a bacterial complex that acts in the rhizosphere of the soil, allows the demobilization of calcium carbonate in the soil, an inert element that cannot be assimilated by the plant, developing carbonic acid in the nutrient solution that frees the calcium ions.

These microorganisms based on *Bacillus* spp, *Rhodobacillus* spp, *Megatherium* spp and others create a balanced system between microelements such as Iron, Magnesium, Calcium and Phosphorus Boron, making them available to the plant.

FINAL RESULT

- Demobilization of the ground calcium equal to 25-40 units.
- Phosphorus demobilization of the soil equal to 15-25 units
- Reduction of Iron and Boron deficiencies.
- Greater fruit consistency and elasticity of the plant.
- Continuity of nourishment to the plant.

DOSES AND METHODS OF USE

Type of application: ON GROUND

VINE: 3-4 kg/ha

ARBOREAL: (Pome fruit, stone fruit, Actinidia, Citrus and Olive) 3-5 kg/ha

HORTICULTURAL: 3 kg/ha

OPEN FIELD CEREALS: 3-4 kg/ha

GREENHOUSE: 300-500gr/1000sqm

It is recommended to distribute it with 1 kg of STIM BLACK.

APPLICATIONS • Administer in the soil before or after sowing or transplanting. It should be applied with organic fertilization in fruit plants using a weeding bar and fertigation.

WARNINGS • *The product is miscible with most pesticides other than products containing copper or antibacterials. However, you should test before applying. The manufacturer is not liable for damage caused by improper use of the product.*

COMPOSITION

Type of organic soil improver:
simple non-composted
vegetable soil improver

- Mycorrhizal content 0.1%
- Rhizosphere bacteria content 4×10^8 CFU/gr
- *Rhodobacillus* Spp
- *Megatherium* Spp
- *Bacillus* Spp

FORMULATION LIQUID

PACKAGING

5 kg tank
10 kg jerry can
200 kg drum
